

Demography

Delfin Albano, Isabela

I. DEMOGRAPHY

The first part of the sectoral analysis is the demographic profile of Delfin Albano. This will serve as the situationer of the municipality by providing general information on the population composition and distribution of the municipality. This section will provide various information on relevant demographic data such as population composition, which can give data on economic dependency ratios and school-age population, population distribution and urbanization trends. Additional demographic data such as marital status, religious affiliation, and literacy rate can also be seen in the profile as it can serve as determinants of the structure and composition of the population.

1.1 Population Composition by School-Age, Labor Force, Working and Dependent Age Population

Table DE-1. Population Composition by School-Age, Working-Age, Dependent-Age Group and Sex, Year 2015

Age Group	Both Sexes	Male		Female		Sex Ratio
		No.	%	No.	%	
Total Population	26,614	13,580	51.03%	13,034	48.97%	1.04
School going population	10,123	5,493	54.56%	4,600	45.44%	1.20
Pre-school (3-6)	2,154	1,123	52.14%	1,031	47.86%	1.09
Elementary (7-12)	3,076	1,614	52.47%	1,462	47.53%	1.10
Secondary (13-18)	2,966	1,802	60.76%	1,164	39.24%	1.55
Tertiary (19-22)	1,927	984	51.06%	943	48.94%	1.04
Working Age (15-64)	17,261	7,834	45.39%	7,588	43.96%	1.03
Labor Force (15 and over)	18,818	9,490	50.43%	9,328	49.57%	1.02
Dependent Population	9,353	4,776	51.06%	4,577	48.94%	1.04
Young (0-14)	7,796	4,090	52.46%	3,706	47.54%	1.10
Old (65-over)	1,557	686	44.06%	871	55.94%	0.79

Source: Computed based on latest NSO/PSA data on household population by age group

Table DE -1 shows the population composition of Delfin Albano in terms of school-age, labor force, working and dependent-age group. As of 2015, the total population of Delfin Albano is at 26,614, the males comprise more of the population than the females as there are 13,580 males as against 13,034 females. This translates into a sex ratio of 1.04 which means the male population outnumbered the female population by four (4) or for every 100 females, there are one hundred four (4) males.

Source: National Statistics Officer/Philippine Statistics Authority

Among the school age population of 10,123 composing 38.04% of the municipal population, ages 7-12 or those belonging to the elementary school age population has the biggest number at 3,076 or 30.39% of the total school-age population. Secondary school ages 13-18 comes in next at 29.30% followed by pre-school age at 21.28% and tertiary level at 19.04%. From the different school going age sex ratios, it can be observed that the male school going age population outnumber the females with a total sex ratio of 1.20. This indicates that for every 100 females there are 120 males belonging to the school-going age population.

Working age population is those belonging to ages 15-64 regardless if working, unemployed or still studying. For the municipality the working age population is about 65%. Meanwhile the population of ages 0-14 accounts for 29.29%, and population age 65 and over is only 5.85% of the municipality's total population.

From the above information, the age dependency ratio which indicates the number of residents who are too young (child dependency ratio) or too old (old-age dependency ratio) to earn a living, thus, depend on those who are productive, or capable to work is at 54% which means that there are 54 dependents for every 100 persons within the working age population (15-64 years old). Out of those 54 dependents, 9 are old-age dependents while 45 are children.

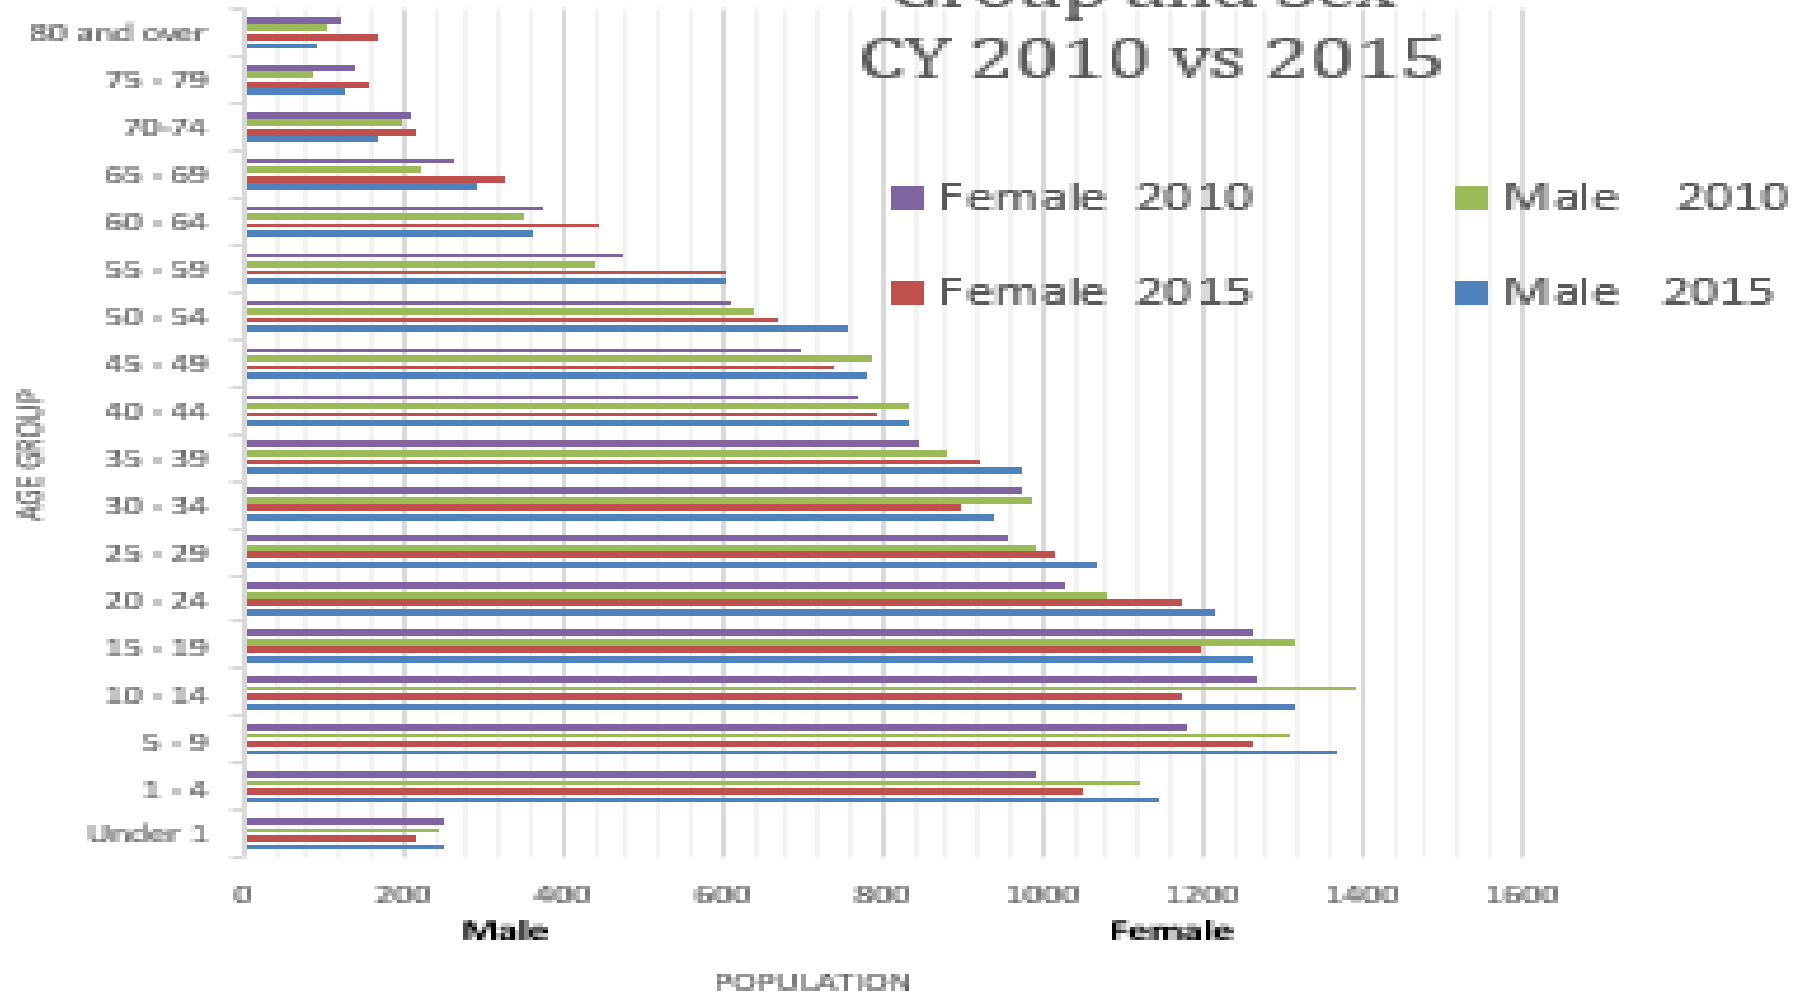

1.2 Population Distribution by Age-Group and Sex

A comparative analysis of population distribution by age-group and sex for two census

Year 2010 and 2015 shows that there were population increases in both males and females in all age grouping with ages 1-24 having the highest share at about 47% and 46%, respectively. This is indicative of a young population for the whole municipality with ages 5-19 having the biggest population among ages 1-24.

Further revealed in Table DE-2 is that among the total females in the municipality, the population of child-bearing women (ages 15-49) was an average of 52% of the total female population for both years indicating that with their number, population may increase massively if these reproductive females would not practice family planning methods. However when considering the municipal average growth rate (AGR) of 0.92% (year 2010-2015), population to balloon at tremendous speed may be not a concern if this AGR is maintained.

Graph DE-2. Population Distribution by Age Group and Sex
CY 2010 vs 2015

Graph DE-2 shows the age-sex structure of the population of Delfin Albano for two census year 2010 and 2015. For both years, the population of Delfin Albano is represented by an expansive pyramid because of the broad base, which means that a very large population belongs to the younger age belonging to 1-24 year old. . Expansive pyramid is brought upon by a high fertility rate since new births are being added to the population thus producing a broad-based age and sex distribution.

Table DE- 3. Household Population by Urban and Rural Barangay and Average Household Size, Year 2015

1.3 Household Population by Urban and Rural Barangays, and Number of Household

Table DE-3 shows the household population in terms of urban and rural barangays. The municipality of Delfin Albano has three (3) urban barangays which are Ragan Sur, San Antonio, and San Juan with San Antonio being the most populated urban barangay. The remaining 26 barangays are all considered rural with Aneg as the most populated rural barangay and Ragan Almacen as the least populated. Urban dwellers compose 24.71% of the total population while 75.29% are rural dwellers

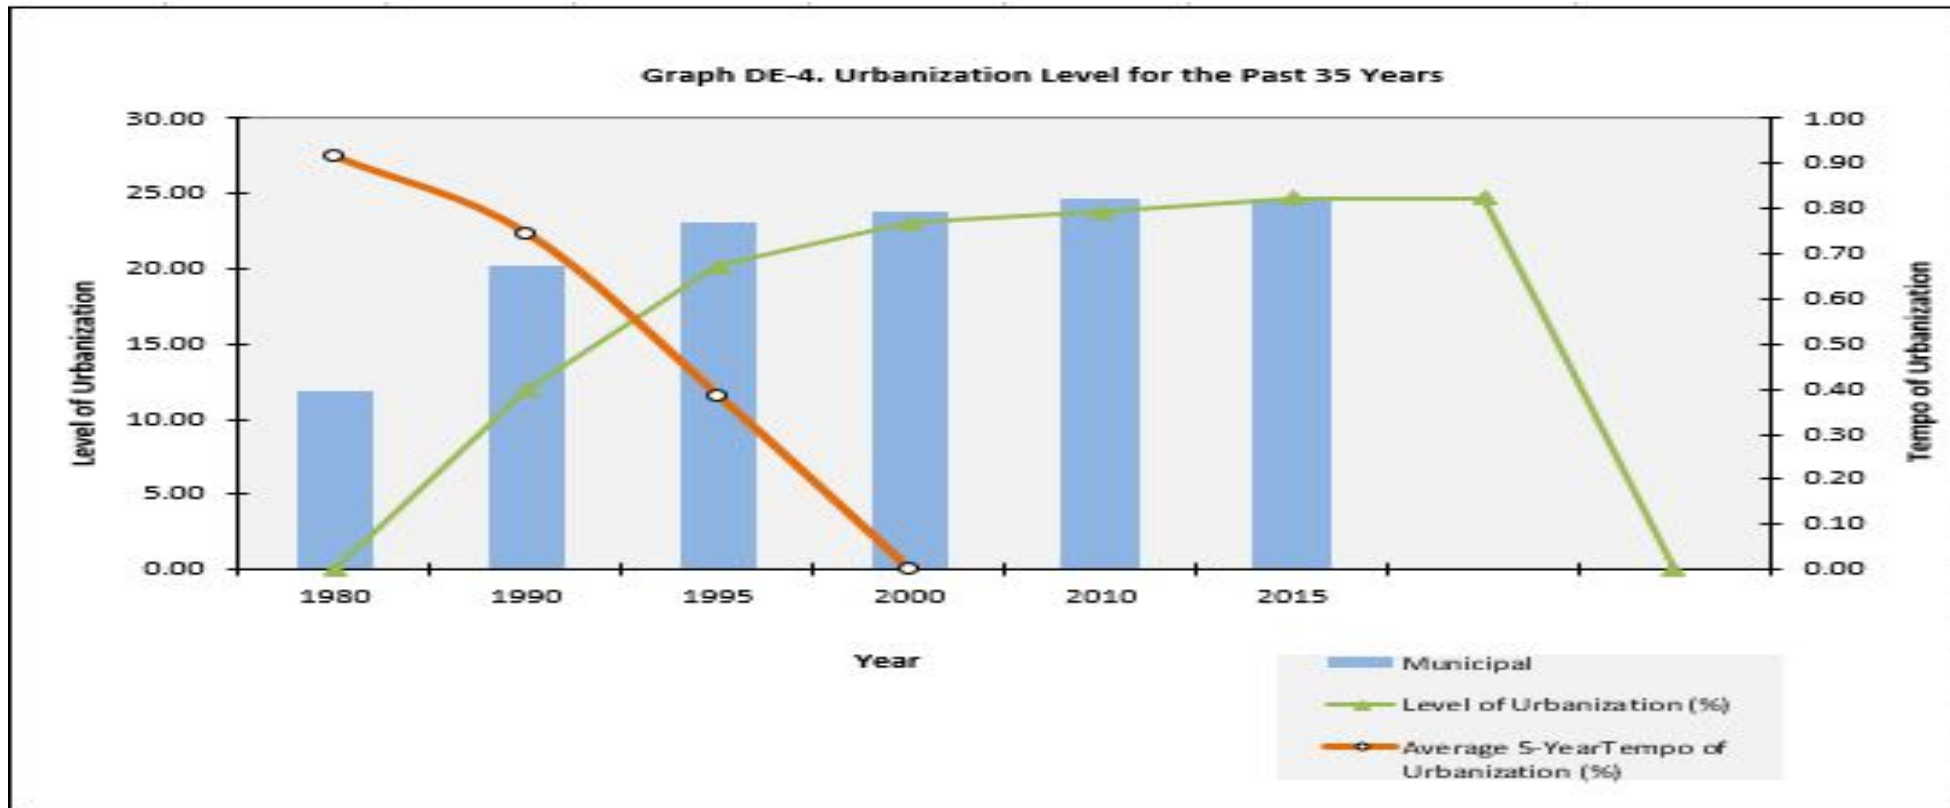

The total number of household for year 2015 is 6,780 of which 1,614 or 23.80% are urban households and 5,166 or 76.20% are rural households. The average household size ranges from 3-5 members averaging at 4 members per household at the municipal level.

1.4 Urbanization Levels for the Past 35 Years

Table DE-4. Urbanization Level for the Past 35 Years

Year	City/Municipal Population			Average Yearly Population Growth Rate (%)		Average 5-Year Tempo of Urbanization (%)	Level of Urbanization (%)
	Urban	Rural	Total	Urban	Rural		Municipal
1980	2114	15611	17725				11.93
1990	4125	16285	20,410	9.51	0.43	9.08	20.21
1995	5023	16788	21,811	9.17	0.62	8.56	23.03
2000	5,617	18,005	23,619	2.37	1.45	0.92	23.78
2010	6,287	19,135	25,422	1.68	0.93	0.75	24.73
2015	6,576	20,038	26,614	1.14	0.75	0.39	24.71

Urbanization level for the current year 2015 can be derived from the data being presented in Table DE-3. It is important to determine the urbanization level of a locality to identify if a progress or development is taking place. Using the urban population of Delfin Albano of 6,576 the urbanization level of Delfin Albano is 24.71% which means that Delfin Albano is still entirely rural because the urbanization level of the municipality is less than 50%, indicating that the economic activities or opportunities in the area, particularly that within the urban barangays are not sufficient enough to trigger in-migration within the municipality.

The table DE-4 shows the urbanization level, average tempo of urbanization and level of urbanization for the past 35 years. While the level of urbanization is considered rural from year 1980 down to 2015, there was upward trend though slow it may seem. As to the tempo of urbanization, it was highest during years 1980-1995 and lowest between years 2010-2015. This means that inhabitants of Delfin Albano during 1990-1995 were mostly living in the urban barangays but slowly out-migrated to the rural barangays for economic opportunities (farming and agricultural related activities) or even looking for bigger areas to build new homes or expand businesses especially for growing families.

1.5 Population Density

Population density is the measurement of the number of inhabitants that make up a population in a defined area, in this case, the barangays of Delfin Albano. The population density of Delfin Albano can be seen in Table DE-5. In order to obtain the population density, the number of inhabitants should be divided by the gross area of the place. It can be seen in the table that the densest barangay in the municipality is San Andres at 1,559 inhabitants per square kilometer. All barangays that have reached the thousand mark in terms of population density are three (3) of the rural barangays. The population with the least density is barangay San Macario at 37 inhabitants per square kilometer. The population density of the province of Isabela for the same year is 130 inhabitants per square kilometer.

It is significant to identify the population density of an area to know if the resources within a specific area is enough to sustain the inhabitants living proximal to the area. Also, it can be used to plan for programs and projects which can aid in the conservation of resources to avoid going beyond the carrying capacity of the land.

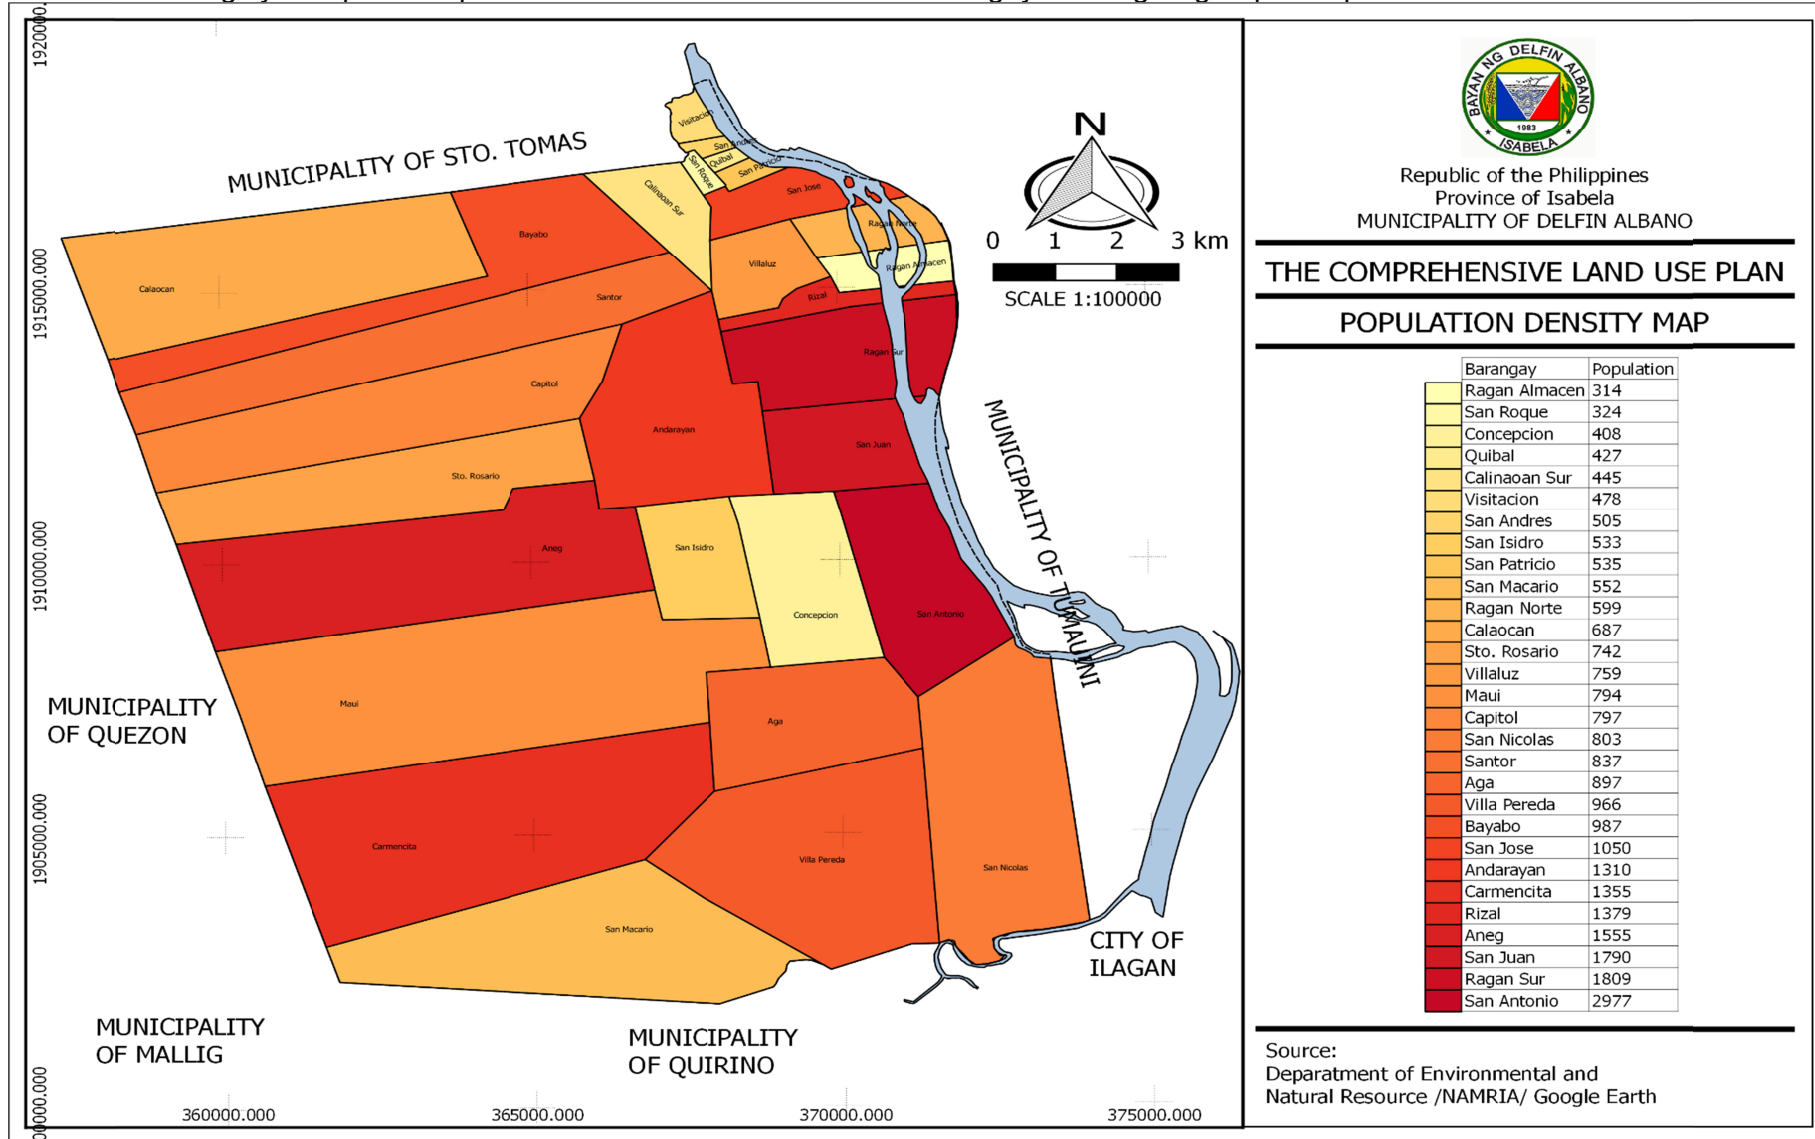

Table DE-5. Population Density by Barangay, Year 2015

Barangay	Population	Gross Area (sq. km)	Population Density (persons/sq km)	Population Density (Province)

Source: PSA/MPDC

Map I-1 gives the visual representation of the population density of Delfin Albano as elaborated in Table DE-5.. It can be seen in the map that the urban barangays of the municipality have gross density ranging from 250-450 persons per square kilometer or an average of 322 persons per square kilometer or roughly 3-4 persons per hectare. This translate to the barangays having large spaces potential for settlements and other urban activities.

Map I-1. Population Density of Delfin Albano

1.6 Historical Growth of Population As of 2015, Delfin Albano has a population of 26,614 which is at its highest since its inception. Table DE-6 further discusses the increase in the population of Delfin Albano from 1960 until 2015 vis a vis provincial, regional and national populations. It can be said that the municipality of Delfin Albano did not experience any decrease in the population. As to the provincial, regional and national data, it can be deduced that their respective population count experienced no decreases as reflected in the positive AAGRs.

The highest population growth rate was felt most by the municipality between years 1960 to 1980 at a 2.61% AAGR.

Between 1970 and 1975 has a population increase of 1,680 with an annual growth rate of about 2.31%. The 1975 and 1980 census year revealed a

Table DE-6. Historical Growth of Population

Year			Annual Growth Rate (%)			
	Population	Increase/Decrease				
	Total	Total	Municipal ³	Provincial ¹	Regional ¹	National ¹
1960	10,742					
1970	13,905	3,163	2.61	3.91	3.7	2.87
1975	15,585	1,680	2.31	2.42	2.62	2.75
1980	17,725	2,140	2.61	3.57	2.75	2.66
1990	20,410	2,685	1.42	2.18	2.01	2.33
1995	21,811	1,401	1.34	1.46	1.51	2.32
2000	23,619	1,808	1.61	2.10	2.25	2.36
2007	24,899	1,280	0.76	1.22	1.16	2.21
2010	25,422	523	0.70	2.05	1.92	1.11
2015	26,614	1,192	0.92	1.36		

Source: NSO/PSA

net population increase of 2,140 with growth rate of 2.61%.

Between years 1980 and 2000, the municipality continued to grow although with an AAGR lower than the previous census years and averaging between 1.34-1.61%. The turn of the twentieth century showed lowered AAGRs for the municipality manifesting low population growth at a range of 0.76-0.92%.

The table below shows the different Average Annual Growth Rate (AAGRs) in the population of Delfin Albano at specific census years. The AAGR of Delfin Albano from 2010 - 2015 is at 0.92%. With this growth rate, the municipality is expected to double its population in seventy-five (75) years.

Graph DE-6 shows the apparent increasing trend in the population of Delfin Albano since the 1960s. It further illustrates the different AAGRs at the municipal, provincial, regional and national levels.

1.7 General Health Indicators

Fertility and mortality are the major indicators of the general health situation of the municipality discussed in this section.

For fertility, one of the indicators is Crude Birth Rate (CBR). For year 2012-2016 as shown in Table DE-7, there is a significantly decreasing trend in the CBR. From as high as a CDR of 20.67 per 1000 mid-year population in 2012, it decreased by 0.99% in 2013, further lowering to 0.87% in year 2014, the lowest CBR in that five-years period. In 2015, the CBR further drop by 0.95% difference from year 2013 tapering down again in 2016 by 0.92%. The marked improvements in low CBR can be an outcome of the aggressive programs on responsible parenthood of the Department of Health which prospective mothers were taught and subsequently adopted by them.

An indicator for mortality is the Crude Death Rate (CDR). The municipality for years 2012-2016 showed fluctuating results in its CDR. In year 2012, the CDR was at 5.15 but was reduced in 2013 by 0.92% but again increased in year 2014. The following year 2015 saw a decrease in CDR at 4.62%, the lowest CDR so far but suddenly jacked up in 2016 at 5.41 which is the highest CDR in the five year period.

Table DE-7. Crude Birth Rate (CBR) and Crude Death Rate (CDR) for the Past Five Year 2012-2016

Period	CBR	% Increase/Decrease from Previous Year	CDR	% Increase/ Decrease from Previous Year
2012	20.67		5.15	
2013	20.38	0.99	4.72	0.92
2014	17.69	0.87	4.84	1.03
2015	16.79	0.95	4.62	0.95
2016	15.42	0.92	5.41	1.17

Source: MHO

Graph DE-7. Crude Birth Rate (CBR) and Crude Death Rate (CDR) for the Past Five Years 2012-2016

1.8 Literacy Rate

Table DE-8 shows the number of literate residents of Delfin Albano compared to the provincial literacy rate. The literacy rate of the municipality is 98.96%, which means that out of the 21, 312 total population of 10 years old and over, 21,091 are literate. This number represents the percentage of the population who have at least completed a year in elementary education to the population 10 years old and over. This is the population who are able to read and write.

For the province of Isabela, the literacy rate was computed at 98.97% while slightly lower by 0.01%, this reflects that the people of Delfin Albano are equally competitive to that of the other municipalities and cities of the province of Isabela in the ability to read and write.

Noteworthy to mention that only a few of the population are illiterates at 1.04%.

Table DE-8. Literacy Rate of Population 10 Years Old and Over, by Sex Year 2015

Indicator	Municipal						Provincial					
	Male		Female		Both Sex		Male		Female		Both Sex	
	No.	Rate %	No.	Rate %	No.	Rate %	No.	Rate %	No.	Rate %	No.	Rate %

1.12 Labor Force and Employment

Table DE-12 reflects the labor force and employment of the municipality and the province.

The municipality's labor force or those belonging to ages 15 and above totaled to 18,818 of which 10,828 (57.5%) are gainfully employed. From the gainfully employed, 85.6% are males and 29% are females. Unemployed labor force totaled to 42.5%. There are more non-economically active females than the male labor force. In fact, only 14.4% of the total males 15 years old are unemployed as against 71% of the total female population 15 years old and over. This numbers show that the females in the municipality focus on managing their household rather than earning money. This dynamic is common among Filipino households as the father, who is the head of the family, is the breadwinner while the mother takes care of all household related activities.

At the provincial level, employment rate is slightly above the municipal level by 3.2% hence a reduced unemployment rate by 3.2%. Generally those unemployed or the non-economically active population of the labor force consist of full-time housewives, students, retirees and other similarly-situated people.

Table DE-12. Labor Force Population by Sex and Employment Status, Year 2015

Sex	Municipal					Provincial				
	Population 15 Yrs and Over	Employed	%	Unemployed	%	Population 15 Yrs and Over	Employed	%	Unemployed	%

1.13 Overseas Workers for the Past Five (5) Years

For the past five years 2013-2017, there was an evidently increasing number of overseas workers of the municipality. From a recorded 2,011 workers it ballooned to 2,819 in 2017 or an increase of 40.18% over a period of 5 years. During the first three years 2013-2015 more females were going abroad for employment than their male counterparts. However, the recent years 2016-2017 saw a rise in the number of male OFWs now exceeding the number of female OFWs of the municipality.

Table DE-13. Overseas Workers for the Past Five Years

Year	No. of Overseas Workers			Increase / Decrease in No.	Increase / Decrease in Percent
	Total	Male	Female	Total	Total
2013	2011	978	1033		
2014	2186	1003	1183	175	8.70%
2015	2,333	839	1494	147	6.72%
2016	2,554	1875	679	221	9.47%
2017	2,819	1,461	1,358	265	10.38%

Source: MPDC

Overseas Filipino Workers (OFWs) working and living abroad leave their families unmindful of the risks involved just to improve their economic conditions. These OFWs create a growing middle class contributing in nation-building and increasing the country's GDP as they invest their income to industries like housing, transportation, education and manufacturing.

From among the 5 years old and over municipal household population of 12,181, the elementary level manifested the highest percentage of attendance at 39.70%. Trailing closely is the secondary level at 38.90% followed by college undergraduates at 8.50% then college graduates at 6.99%. At the provincial level, the same pattern has been observed but at lower percentages. Another noteworthy observation is that the quantity of successful graduates as it goes up the educational tier showed a diminishing pattern both at the municipal and provincial levels. Such failure in access to education could be due to poor economic condition of the household.

1.15 Projected Population and Households

Following the arithmetic geometric progression tool, the projection of the population for the next ten (10) years is based on the 2010-2015 Average Annual Growth Rate (AAGR) of 0.92%. From 26,614, it is expected to increase to 29,706 in year 2027.

The municipal population is expected to doubling in 75 years from 2015 or in year 2090.

For the total projected household at the targeted average household size of four (4) members per household, it is expected to grow by 646 households or a total of 7,426 households in year 2027.

Table DE- 15. Projected Population and Households

Annual Population Growth Rate:

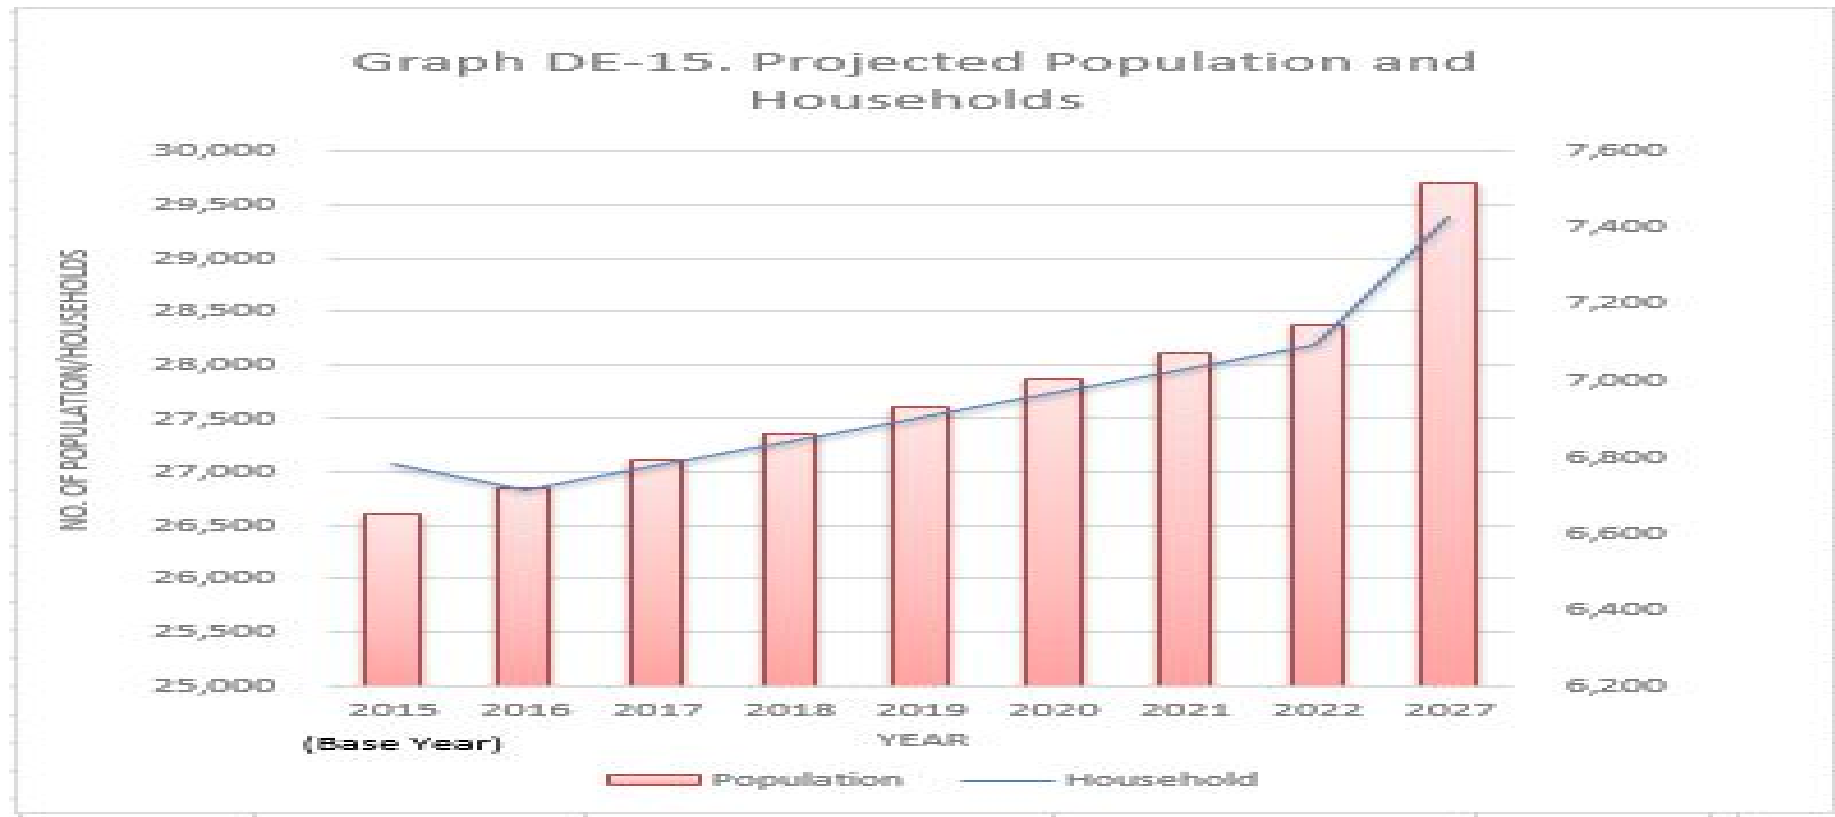

0.92%

Average HH size:

4.00

Year	Population	Household
2015	26,614	6,780

1.16 Population Projection by Barangay

The yearly population projection per barangay is computed based on the average growth rate of 0.92% following the arithmetic geometric progression tool. The three (3) urban barangays expected to lead in the population increase. Barangay San Antonio taking the lead will have a population of 3,323. Barangays Ragan Sur and San Juan following closely will have populations pegged at 2,019 and 1,998, respectively.

Among the rural barangays, Aneg, Rizal and Carmencita are expected to lead in the population count although their projected populations shall still be below the 2000th mark.

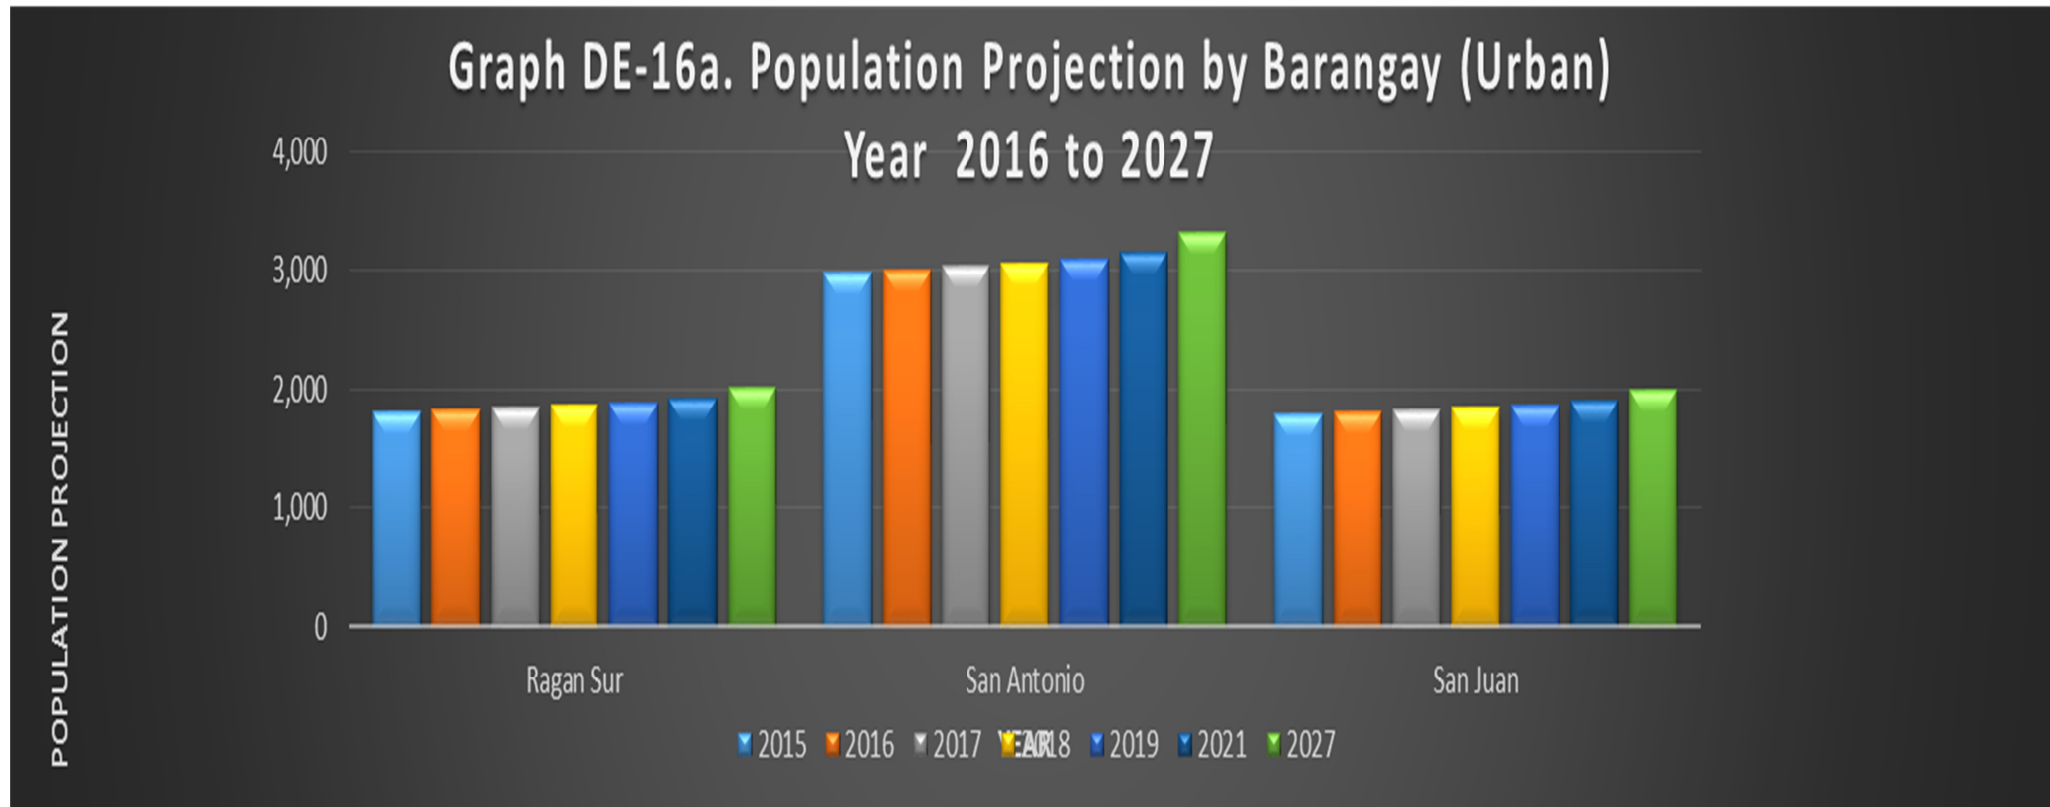

There are four (4) other rural barangays with projected population still within the 1000th mark. All other rural barangays have projected population below the 1000 level. Among them, barangays Ragan Almacen, San Roque and Concepcion will have the least increase in population projections which fall below the 500th mark.

Table DE-16. Population Projection by Barangay, Year 2015

Table DE-16 gives the projected population of each barangay in Delfin Albano, it also gives the participation rate of the barangays. The participation rate shows the percent rate of the barangay to the total population. It will help provide disaggregated projections that can significantly affect planning. Graph 16a and 16b gives you a visual presentation of the projected population of the 29 barangays of Delfin Albano.

1.17 Projected School-Age Population, Labor Force, Working and Dependent Population

Table DE-17 shows the Projected Population by school age population, labor force, working and dependent population. The school-going age population or those with age 3-22 is projected to reach 11,384 by the end the planning period. Labor force population increases to 21,161 for the planning period. The working or productive population is expected to reach 19,410 by year 2027. Dependent population also increases to 9,353 for the planning period.

Table DE-17. Projected School-Age Population, Labor Force, Working Age and Dependent Population

2. Physical Features

321 Geographical Location

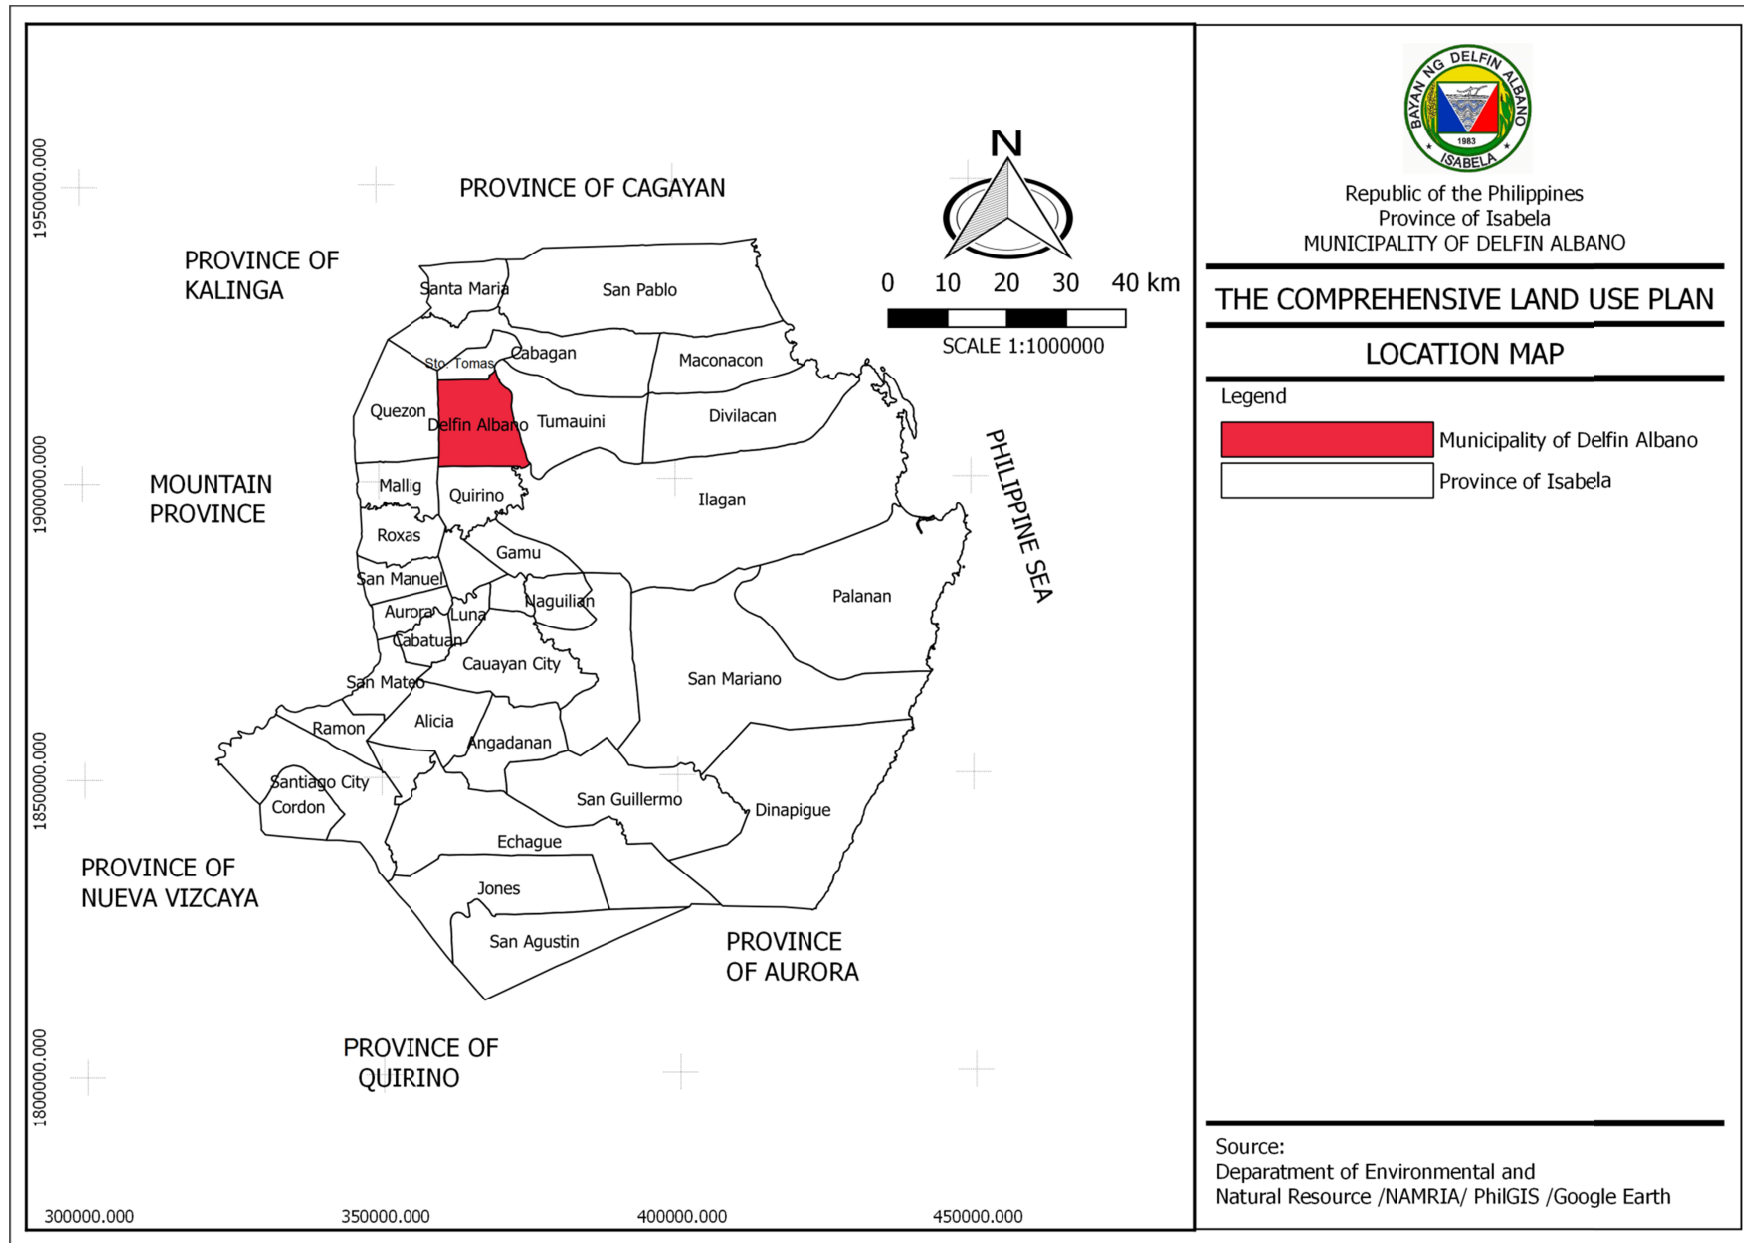

The municipality is composed of twenty-nine (29) barangays and seven sitios. Map 1 shows the boundaries of barangay in Delfin Albano. Barangay Ragan Sur is the seat of Government that is centrally located along the Provincial / National Road from Ilagan and Mallig to Delfin Albano to Santo Tomas and Santa Maria this province.

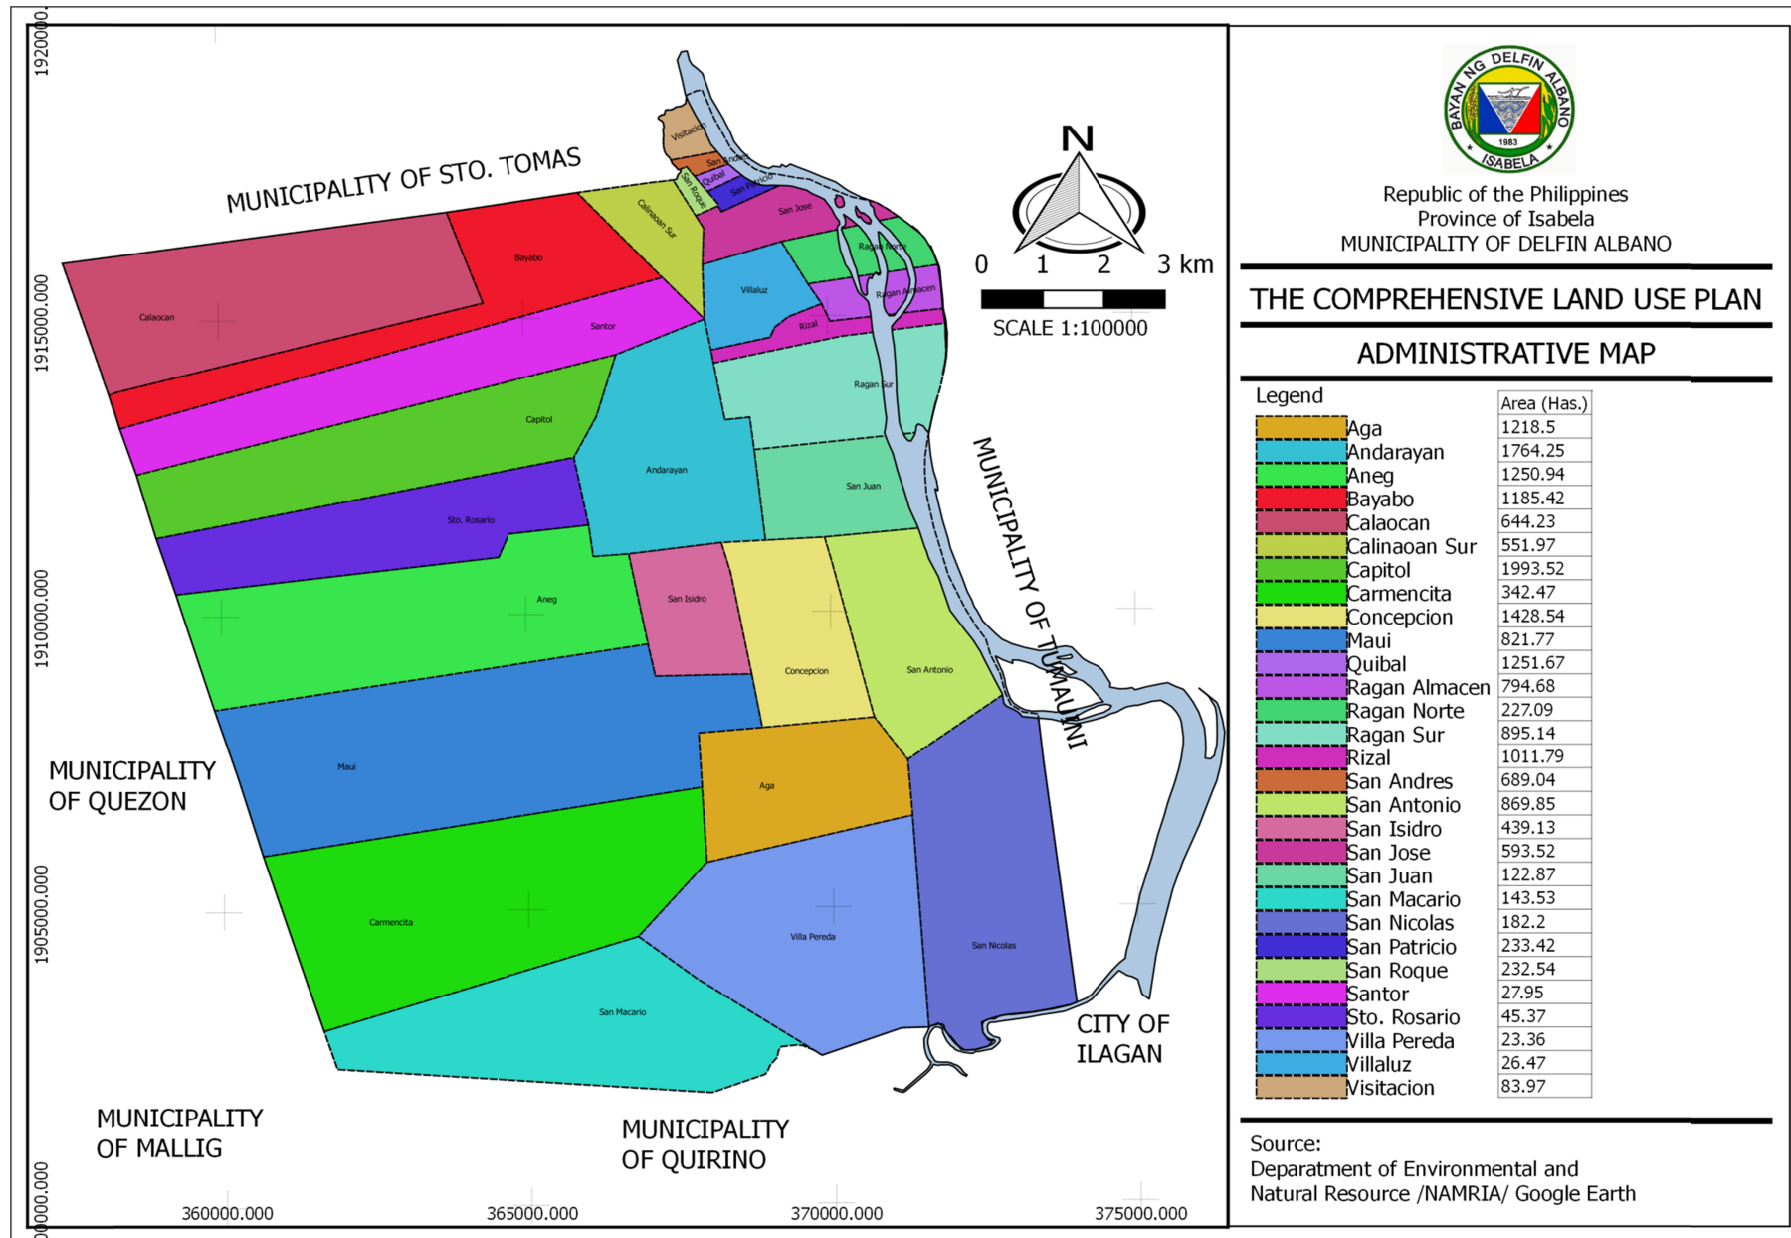

Delfin Albano has an area of 19,095.23 hectares as per records of DENR-CENRO Isabela. It is located some 35 kilometers, northwest of Ilagan, the capital town of the Province. It is bounded on the north by the municipality of Sto. Tomas, on the east by the municipality of Tumauni, the Cagayan River as the natural boundary, on the west by the municipalities of Quezon and Mallig and on the south by the municipalities of Quirino and Ilagan with Mallig River as natural boundary. The boundaries of Delfin Albano against its neighboring municipalities can be seen in Map 2.

Delfin Albano is subdivided into two (02) physiological areas namely the Eastern Area long the Cagayan River which is good for intensive agriculture and high density urban development as the western area along the mountain range which is good for intensive agriculture, pasture and forest purposes.

2.2 Slope

The town center of Delfin Albano is generally flat, as seen in Map 3. Rolling terrains with low-lying elongated ridges defined the eastern portion of the town. The Cagayan River serves as the main tributary with other minor tributaries draining towards it, resembling a dendritic pattern typifying the drainage system in this part of the Cagayan Valley Basin.

The town has also three (03) slopes classifications prevailed, which is displayed in Map 3. The 0-3% slope found on the level land ranging from the north to the southern part of the town. The 3-8% slope found adjacent the level land ranging from the north to the southwestern part of the town and the 8-15% slope found at the forest area ranging from north to south at the northwestern part of the town. The foregoing data revealed that the municipality has vast potentials for agricultural lands.

2.3 Geology

It was revealed that Delfin Albano has only one geological classification which is classified as Marly Limestone's and poorly consolidated sediments. The central and northern part of Cagayan Valley including Delfin Albano is generally underlain by thick sequence of fine to coarse-grained sedimentary units belonging to the Ilagan Formation.

It grew along the banks of mighty Cagayan River and swift of Mallig and Siffu River. The town has no indication of any existing or probable fault line and has artesian aquifer at 12-39 meters that are recharged continuously.

2.4 Climate

Delfin Albano is nestled in the verdant Cagayan Valley. It is protected by the Sierra Madre in the east, the Cordilleras in the west and by the far-off Caraballo Mountain in the south. The town is located in the typhoon belt of the Philippines and generally has the third type of climate which is characterized by no pronounced maximum rain period with a short day season lasting from one to three months. In this type, rainfall starts in July and continues through January with either October to November as the peak of the rainy season. The locality of this type is partly sheltered from the northwest monsoon and trade winds and open to the southeast monsoon or at least to frequent cyclonic storms.

2.5 Soil Types

The municipality has three (3) soil types according to the Department of Agriculture-Soil Management Bureau. The San Manuel Sandy Loam which are found on the eastern part, the Quingua Silty Clay which is found on the south eastern part and the San Juan Clay which is found on the western part of the town. Map 5 shows the different soil types found in the municipality of Delfin Albano.

Delfin Albano is subdivided into two (02) physiological areas namely the Eastern Area long the Cagayan River which is good for intensive agriculture and high density urban development as the western area along the mountain range which is good for intensive agriculture, pasture and forest purposes.

2.6 Drainage

Drainage wise, the presence of the Cagayan River which serves as an emptying portion of the municipality is of great help especially during floods and rainy season. These are several creeks which aid in the drainage of various agricultural areas in the municipality. The drainage system of Delfin Albano can be observed in Map 6. It can be observed in the map that most drainage canals are located in the western part of the municipality.

The municipality of Delfin Albano has the third type of climate which is characterized by no pronounced maximum rain period with a short dry season lasting from one to three months. In this type, rainfall starts in July and continuous through January with either October to November as the peak of the rainy season. The locality of this type is partly sheltered from the northwest monsoon and trade winds and open to the southeast monsoon or at least to frequent cyclonic storms. The annual average rainfall recorded for the past five (5) years was 2,376.18 mm from 2006 to 2010 and a maximum rainfall of 198.014mm.

2.7 Temperature

Temperature is hot and humidity is high the year round within Delfin Albano. Observation shows an annual mean temperature of 21.34 degrees Centigrade, a mean maximum of 30.07 degrees Centigrade within the municipality, based on a five (5) years period from 2006-2010. Evaporation is high the year round within Delfin Albano except for the month of November, December and January. Observation shows an annual average of 126.54 mm from the period 2006-2010. Wind velocity is relative normal the year round except when tropical storm hit the area. Observations show an annual average wind velocity of 33.7534 kph from the period 2006-2010.
